

# Adithya Narayan

adithyanarayanb@gmail.com | adinarayanb.github.io | Boston, MA

## Education

---

**Northeastern University - Khoury College of Computer Sciences** – Boston, MA

Master of Science in Computer Science, May 2024

**Ramaiah Institute of Technology** – Bangalore, India

Bachelor of Engineering in Information Science, June 2020

## Experience

---

**Machine Learning Engineer**, Bear Brown LLC – Boston, MA

July 2023 – Present

- Built a RAG(Retrieval Augmented Generation) LLM model using Transformer Models, storing embeddings in Google Cloud and obtained through parsing over 1,000 NGO-related FAQ PDFs
- Deployed the LLM model into production as a secure, scalable chatbot using React and AWS
- Used Redis and Flask to implement a scalable LLM querying REST API with question-response caching
- **Tools Used:** LangChain, LLM's, Transformer Models, Google Cloud, React, AWS, Redis, Flask

**Machine Learning Research Engineer**, Skit – Bangalore, Karnataka, India

Dec 2021 – Aug 2022

- Increased numeric speech recognition model accuracy by over 20% for five different clients using finetuned DeepSpeech and hybrid CNN/GMM models, scaling to over 10 million customers
- Reduced deep learning model training/benchmarking time from 2 days to 3 hours by building model inference pipelines on Kubeflow
- Built internal CLI tools with Go Routines to generate high-quality synthetic speech transcriptions, enabling the solutions engineering team to fine-tune customer models in 5 hours instead of 2 days
- Increased customer resolution rate by 30% by performing A/B testing for conversation strategy selection
- **Tools Used:** DeepSpeech, PyTorch, AWS, Kubernetes, Kubeflow, Go Routines, Metabase, PostgreSQL

**SDE - Machine Learning**, Stride.ai – Bangalore, Karnataka, India

May 2021 – Jul 2021

- Developed a multilingual Named Entity Extraction microservice with an F1 score of 0.8, using Transformers, SkipGram, and RNN-LSTM, deployed across 10+ public schools
- Extended internal large dataset preprocessing platform with Airflow, authoring pipelines to denoise and clean over 10,000 multilingual documents stored on AWS S3
- **Tools Used:** Transformers, SkipGram, RNN-LSTM, AWS, Flask, Kafka, Airflow

**IT Software Engineer**, Shell – Bangalore, Karnataka, India

Sep 2020 – April 2021

- Devised and built ETL pipelines for regulatory services and reporting using SQL and Object-Oriented ABAP, querying 100+ GB daily for 500+ users across Finance and HR teams
- **Tools Used:** SQL, Object-Oriented ABAP

## Projects

---

**LLMs for Speech and Documents**

*AWS, Kafka, LangChain, React, Flask*

- Built a RAG finetuned LLM model using ETL pipelines to convert audio and PDF files into LLM-readable metadata and developed a search/natural language querying interface on top of the LLM that allows users to talk to the LLM or find context within the corpus

## Skills

---

**Deep Learning:** Transformers, LLM, PyTorch, TensorFlow, CNN, Seq2Seq, RNN-LSTM, YOLO-v5, Gen AI

**Data Analysis:** Pandas, NumPy, Scikit-Learn, Matplotlib

**Backend:** REST, gRPC, PostgreSQL, MongoDB, Event-Driven Microservices, Django, AWS, Redis

**DevOps/Observability:** GitHub Actions, Docker, Terraform, Datadog, Elasticsearch, Logstash, Kibana

**Orchestration/Data:** Kubeflow, Kafka, Kubernetes, Airflow, Spark
